Director, Human Resources	Health and Safety Coordinator	Recommended/Approved by Education Council		N/A	
		Approved by President		2012-05-30	

1 Purpose

This policy:

- (1) outlines procedures to be followed whenever an employee works alone, and
- (2) delegates responsibilities to management, supervisors, and workers regarding safety for employees working alone.

2 SCOPE / LIMITS

This policy applies to all individuals employed by Selkirk College – contractors, staff, faculty, and students – who work alone or in isolation, and whose well-being may be compromised by factors such as health (e.g. unexpected heart attack), hazard exposure (e.g. chemical burn, toxic gas release) and/or physical trauma (e.g. being knocked unconscious as a result of a slip and fall, personal assault, injuries from machineries).

3 PRINCIPLES

The College strives to minimize risks to employees, students, and contractors at worksites while performing their duties. The goal is to minimize disabling injuries to workers by reducing exposures to hazards through risk analysis, ensuring sufficient training, implementing safe operating procedures, and providing appropriate personal protective equipment.

Selkirk College is committed to implementing a system to support the safety and security of employees working alone. Each department or academic school must conduct a risk assessment and eliminate or control the hazards of working alone. The risk assessment must be reviewed on an annual basis or when work processes are introduced or changed.

4 DEFINITIONS

Hazard Means a situation, condition, or thing that may be dangerous to the safety or health of

employees.

Working Alone This policy applies if a worker is working alone at a work site where assistance is not readily

or in available in the event that there is an emergency or in the event that the worker is ill or

Isolation injured.

Work Site Any location where Selkirk College business is performed is considered part of the work site,

including traditional office and maintenance environments, field locations, vehicles, or off-site

work locations. This does not include the home office.

5 PROCEDURE

Whenever possible, staff should work in teams or with another worker in a buddy system. It is inevitable that during the course of performing duties on behalf of or related to the College, there are occasions that would necessitate workers to be working alone or in isolation. Under these circumstances, workers will benefit by regularly having their well-being monitored at predetermined intervals, to be set out by employee and manager, so quick emergency response and assistance can be provided if required.

Supervisors must review historical data of injuries and incidents and conduct a detailed risk assessment in consultation with the worker(s) to identify when employees are working alone and the level of risk that this presents. Historical injuries and incidents data is maintained by the Joint Occupational Health & Safety Coordinator and is accessible to supervisors upon request.

Well in advance of a working-alone situation, the supervisor must:

- (1) determine if there is a need to work alone or in isolation,
- (2) complete a Hazard Identification and Risk Management Survey (Appendix A), and provide this information to the worker.
- (3) detail a strategy to ensure safety and regulatory compliance, and
- (4) complete a Working Alone or in Isolation Information Form (Appendix B) and submit the form in advance of the scheduled work to the Joint Occupational Health and Safety Committee or Human Resources.

6 RESPONSIBILITIES

- **6.1** Management will ensure that:
 - (1) risk assessments are conducted to identify existing or potential working-alone hazards at Selkirk College (confirmation of the departmental risk assessment which highlights any changes must be submitted to the Joint Operational Health and Safety (JOH&S) Coordinator by December 31 of every year),
 - (2) measures are taken to eliminate or control the hazards of working alone at Selkirk College,
 - (3) affected workers are informed of the hazards and methods used to control or eliminate hazards,
 - (4) employees who work alone have discussed with their supervisor and developed a plan to work along safely that includes a means of communication with individuals who can respond to an emergency situation, and
 - (5) all Selkirk College employees are aware of the Working Alone or in Isolation policy and procedures.
- **6.2** In addition to the responsibilities outlined in the procedure section, supervisors will:
 - (1) provide an effective system for communication between any worker who works alone and persons capable of assisting the worker, and

(2) ensure incidents of working alone or in isolation are reported and documented.

6.3 Employees will:

- (1) inform their supervisor prior to working alone,
- (2) report all work site incidents immediately to their supervisor as required by WCB, and
- (3) participate in work site risk assessments and the implementing of procedures to eliminate or control hazards of working alone.
